

Situation of 17 March 2021 edition of the hours 14-next update 19-03-2021 hours 14, forecaster: MA

reliability: 80%

Locally detachable wind-drifted snow, even with low overload at high altitudes.

Alpi Carniche occ., Alpi Carniche orient., Alpi Giulie, M. Canin

Prealpi Carniche occ., Prealpi Carniche orient., Prealpi Giulie

Thermal Zero: 1000 m
T.average 1000: 0 °C
T.average 2000: -7 °C

Weather by OSMER - ARPA FVG:

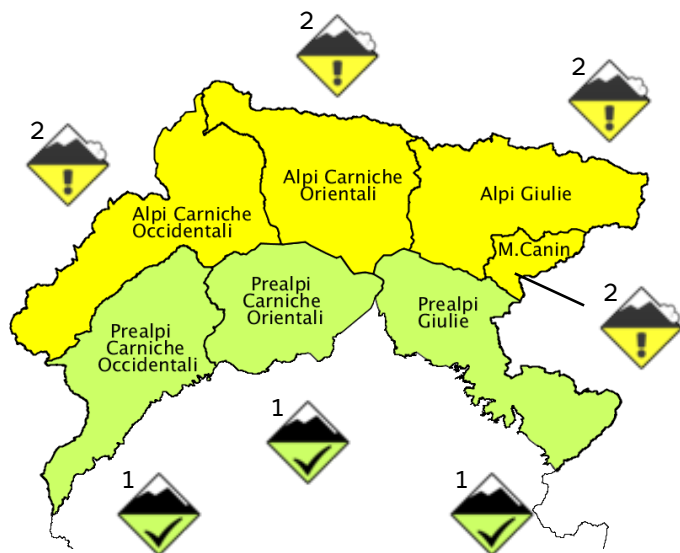

Clear or partly cloudy skies, moderate northern wind, especially at high altitudes.

Station	quota (m)	snow depth (cm)	fresh snow (cm)	Tmin (°C)	Tmax (°C)
PIANCAVALLO	1280	58,0	0	-3,6	3,7
TARVISIO	800	10,0	0	-4,7	7,8
SELLA NEVEA - LIVINAL LUNC	1837	437,0	0	-8,5	-3,1
RIFUGIO TAMAI - ZONCOLAN	1750	266,0	0	-7,1	-0,3
VARMOST M.TE SIMONE	1870	165,0	0	-8,3	-0,3

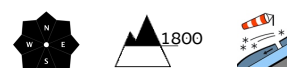

Snow cover conditions and avalanche danger: Clear or partly cloudy skies with low temperatures. In the Alps, above the treeline, avalanche danger is 2 (moderate): winds at high altitudes have altered fresh snow. The danger is constituted by wind-drifted snow accumulations above the treeline. Hazardous points are located in basins, gullies, near ridges, and are more widespread at highest altitudes and on northern slopes. These areas should be avoided, since they can create generally small avalanches if stressed, but also locally with the passage of single skiers-hikers, especially on steep slopes. Small natural avalanches are possible on very steep slopes. In the Pre-Alps and Alps below the treeline, avalanche danger is 1 (low). Chance of small local avalanches on extreme slopes, mainly in the north, and isolated small spontaneous avalanches on steep slopes.

Forecast for Thursday 18 March 2021, reliability: 80%

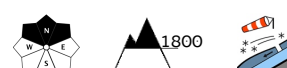

At high altitudes, locally unstable wind-drifted snow, especially on northern slopes.

Alpi Carniche occ., Alpi Carniche orient., Alpi Giulie, M. Canin

Prealpi Carniche occ., Prealpi Carniche orient., Prealpi Giulie

Thermal Zero: 800 m
T.average 1000: -1 °C
T.average 2000: -9 °C

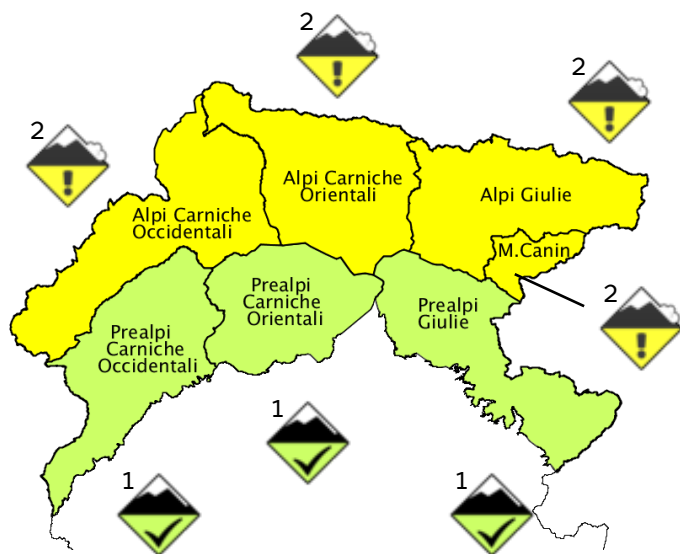

Weather by OSMER - ARPA FVG:

Clear or partly cloudy skies. In the afternoon, weak snowfall above 500 m.

Snow cover conditions and avalanche danger: Continued good weather with low temperatures. Possible weak precipitation in the afternoon. On the Alps above the treeline, avalanche danger will be 2 (moderate) and will continue to be constituted by superficial accumulations of wind-drifted snow accumulations in basins, gullies, and near the ridges. These deposits, which are more widespread at higher altitudes and on northern slopes, could cause generally small avalanches if overloaded, but also locally with the passage of single skiers-hikers, especially on steep slopes. Small natural avalanches are still possible on very steep slopes. In the Pre-Alps and Alps below the treeline, avalanche danger will be 1 (low). Chance of small local avalanches on extreme slopes, mainly in the north, and isolated small spontaneous avalanches on steep slopes. Beware of the risk of slipping on icy areas or areas leveled out by wind.

Forecast for Friday 19 March 2021, reliability: 70%

At high altitudes, locally unstable wind-drifted snow, especially on northern slopes.

Alpi Carniche occ., Alpi Carniche orient., Alpi Giulie, M. Canin

Prealpi Carniche occ., Prealpi Carniche orient., Prealpi Giulie

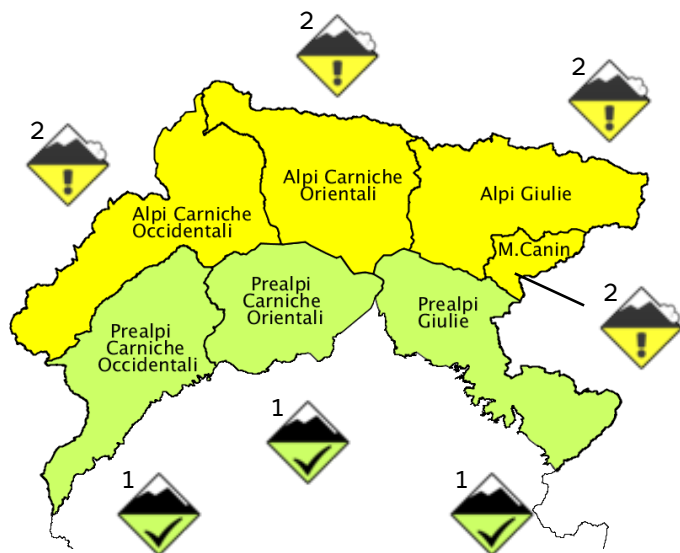

Thermal Zero: 700 m
T.average 1000: -2 °C
T.average 2000: -9 °C

Weather by OSMER - ARPA FVG:
Mostly cloudy skies. Variable in the afternoon.

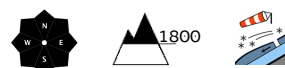

Snow cover conditions and avalanche danger: Mostly cloudy skies. In the Carnic, Julian, and Canin Alps, avalanche danger will be 2 (moderate). On very steep slopes, above 1800-1900 m and at all exposures, in areas with wind-drifted snow accumulations, triggered avalanches, generally small in size, will be possible with high overload. Locally, at the highest altitudes and mainly in the north and on extreme slopes, triggered avalanches with low overload is not excluded. Residual avalanches are possible on sunny slopes. In the Pre-Alps and Alps below 1800-1900 m, avalanche danger will be 1 (low). On steep slopes, especially in the north, triggered small avalanches are possible, in areas with wind-drifted snow accumulations, generally with high overload. Chance of isolated avalanches also on sunny slopes. Beware of the risk of slipping on icy areas or areas leveled out by wind.

Forecast for Saturday 20 March 2021, reliability: 70%

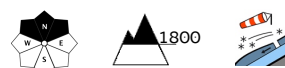

At high altitudes, locally unstable wind-drifted snow, especially on northern slopes.

Alpi Carniche occ., Alpi Carniche orient., Alpi Giulie, M. Canin

Prealpi Carniche occ., Prealpi Carniche orient., Prealpi Giulie

Thermal Zero: 800 m
T.average 1000: -2 °C
T.average 2000: -9 °C

Weather by OSMER - ARPA FVG:
Clear or partly cloudy skies.

Snow cover conditions and avalanche danger: Good weather expected with continued low temperatures. In the Carnic, Julian, and Canin Alps, avalanche danger will be 2 (moderate). On very steep slopes, above 1800-1900 m and at all exposures, in areas with wind-drifted snow accumulations, triggered avalanches, generally small in size, will be possible with high overload. Locally, at the highest altitudes and mainly in the north and on extreme slopes, triggered avalanches with low overload is not excluded. Residual avalanches are possible on sunny slopes. In the Pre-Alps and Alps below 1800-1900 m, avalanche danger will be 1 (low). On steep slopes, especially in the north, triggered small avalanches are possible, in areas with wind-drifted snow accumulations, generally with high overload. Chance of isolated avalanches also on sunny slopes. Beware of the risk of slipping on icy areas or areas leveled out by wind.
