

Situation of 05 May 2021 edition of the hours 14-next update 07-05-2021 hours 14, forecaster: GA

reliability: 80%

**Chance of wet-snow avalanches, both natural and triggered, caused by single skiers-hikers.**

Alpi Carniche occ., Prealpi Carniche occ., Prealpi Carniche orient., Alpi Carniche orient., Alpi Giulie, M. Canin, Prealpi Giulie

Thermal Zero: 2000 m  
T.average 1000: 8 °C  
T.average 2000: 1 °C

**Weather by OSMER - ARPA FVG:**

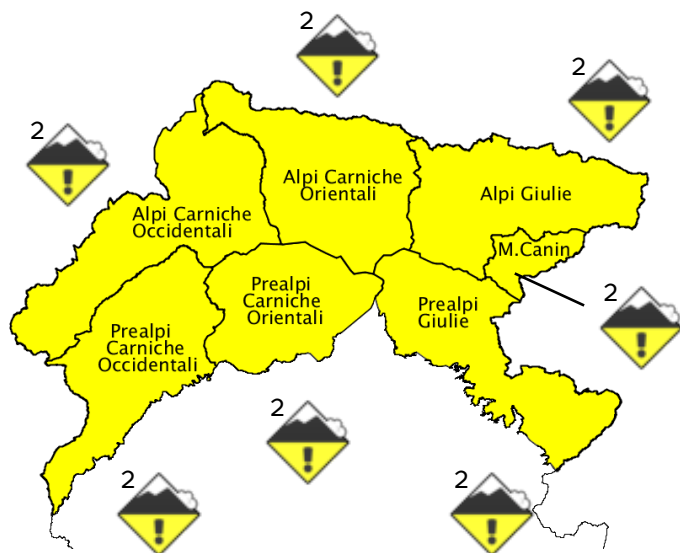

In the afternoon, moderate to heavy rainfall, including storms. Snow from 1800m to 1400-1200m.

Station	quota (m)	snow depth (cm)	fresh snow (cm)	Tmin (°C)	Tmax (°C)
PIANCAVALLO	1280	5	0	1,2	7,3
TARVISIO	800	0	0	5,7	15,1
SELLA NEVEA - LIVINAL LUNC	1837	390	0	1,3	4,6
RIFUGIO TAMAI - ZONCOLAN	1750	197	0	1,0	4,1
VARMOST M.TE SIMONE	1870	89	0	0,4	6,4

**Snow cover conditions and avalanche danger:** The fresh snow that fell on Sunday quickly transformed, except for some northern areas at the highest altitudes of the tallest ranges. The rise in daytime temperatures and the cloud cover in progress favor a rapid weakening of the superficial layer of the snowpack, especially below 2000 m. From the afternoon, new snowfall is expected with snow levels decreasing from 1800 m to 1400 m. Throughout the entire territory, avalanche danger is 2 (moderate). On several steep slopes, at all exposures, medium-sized wet-snow avalanches are possible, while slip avalanches are possible on grassy slopes. Wet-snow avalanches may be triggered by the passage of single skiers-hikers. At the highest altitudes of the tallest ranges, in areas with wind-drifted accumulations, and on the steep slopes of northern exposures, triggered medium-sized slab avalanches may generally occur with high overload.

Forecast for Thursday 06 May 2021, reliability: 80%

**Chance of wet-snow avalanches, both natural and triggered, caused by single skiers-hikers.**

Alpi Carniche occ., Prealpi Carniche occ., Prealpi Carniche orient., Alpi Carniche orient., Alpi Giulie, M. Canin, Prealpi Giulie

Thermal Zero: 2000 m  
T.average 1000: 7 °C  
T.average 2000: 0 °C

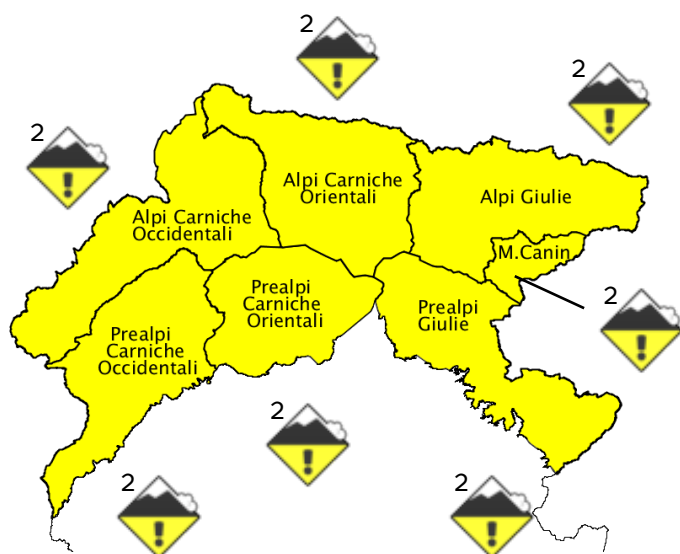

**Weather by OSMER - ARPA FVG:**

Variable cloudiness, possible scattered precipitation, more widespread in the evening. Snow above approx. 2000 m.

**Snow cover conditions and avalanche danger:** Variability, with possible scattered precipitation in the evening. Snow above approx. 2000 m. Throughout the entire territory, avalanche danger will be 2 (moderate). Arise in daytime temperatures rise may favor natural small- and medium-sized triggered wet-snow avalanches on steep slopes, at all exposures. Slip avalanches on generally medium-sized grassy slopes are also possible. On steep slopes below 2000 m, wet-snow avalanches may be triggered by the passage of single skiers-hikers while, above this altitude, in areas with wind-drifted accumulations at all exposures, triggered dry slab avalanches, generally of medium size, may occur with high overload. The possibility cannot be excluded that – locally, at the highest altitudes of northern exposures and on the highest slopes – avalanches may also occur with the passage of single skiers-hikers.

Forecast for Friday 07 May 2021, reliability: 70%

Chance of wet-snow avalanches, both natural and triggered, caused by single skiers-hikers.

Alpi Carniche occ., Prealpi Carniche occ., Prealpi Carniche orient., Alpi Carniche orient., Alpi Giulie, M. Canin, Prealpi Giulie

Thermal Zero: 2200 m  
T.average 1000: 9 °C  
T.average 2000: 2 °C

**Weather by OSMER - ARPA FVG:**

Cloudy with scattered showers, more in the east. Snow at approx. 2000 m, decreasing at 1500 m in the afternoon.

**Snow cover conditions and avalanche danger:** Cloudy with scattered showers, snow initially above 2000 m, possibly decreasing up to approx 1500 m. Throughout the entire territory, avalanche danger will be 2 (moderate). On steep slopes, at all exposures, chance of natural triggered wet-snow avalanches, and also of generally medium-sizes slip avalanches on grassy slopes. On steep slopes below 2000 m, wet-snow avalanches may be triggered by the passage of a single skiers-hikers while, above this altitude, in areas with wind-drifted accumulations at all exposures, small- and medium-sized triggered dry slab avalanches may generally occur with high overload.

Forecast for Saturday 08 May 2021, reliability: 60%

Chance of wet-snow avalanches, both natural and triggered, by single skiers- hikers.

Alpi Carniche occ., Prealpi Carniche occ., Prealpi Carniche orient., Alpi Carniche orient., Alpi Giulie, M. Canin, Prealpi Giulie

Thermal Zero: 2000 m  
T.average 1000: 7 °C  
T.average 2000: 0 °C

**Weather by OSMER - ARPA FVG:**

Generally cloudy skies with freezing point at 2000 m.

**Snow cover conditions and avalanche danger:** Slightly cloudy skies. Throughout the entire territory, avalanche danger will be 2 (moderate). A rise in daytime temperatures may favor natural small- and medium-sized triggered wet-snow avalanches on steep slopes, at all exposures. Slip avalanches on generally medium-sized grassy slopes are also possible. On steep slopes below 2000 m, wet-snow avalanches may be triggered by the passage of single skiers-hikers while, above this altitude, in areas with wind-drifted accumulations at all exposures, triggered dry slab avalanches, generally medium in size, may occur mainly with high overload. The possibility cannot be excluded that – locally, at the highest altitudes of northern exposures and on the highest slopes – avalanches may also occur with the passage of single skiers-hikers.
