

Situation of 07 May 2021 edition of the hours 14-next update 10-05-2021 hours 14, forecaster: GA

reliability: 80%

**Chance of wet-snow avalanches, both natural and triggered due to passage of single skiers-hikers.**

Alpi Carniche occ., Prealpi Carniche occ., Prealpi Carniche orient., Alpi Carniche orient., Alpi Giulie, M. Canin, Prealpi Giulie

Thermal Zero: 2000 m  
T.average 1000: 9 °C  
T.average 2000: 1 °C

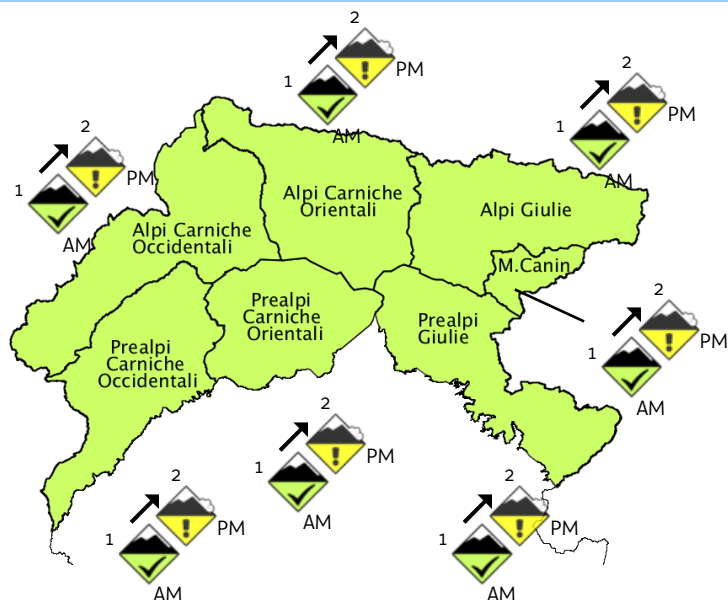

**Weather by OSMER - ARPA FVG:**  
Chance of local showers and thunderstorms in the afternoon. Improving in the evening.

Station	quota (m)	snow depth (cm)	fresh snow (cm)	Tmin (°C)	Tmax (°C)
PIANCAVALLO	1280	0	0	2,4	8,8
TARVISIO	800	0	0	4,8	10,9
SELLA NEVEA - LIVINAL LUNC	1837	391	2	1,0	4,4
RIFUGIO TAMAI - ZONCOLAN	1750	190	0	-0,1	3,4
VARMOST M.TE SIMONE	1870	82	0	1,9	6,0

**Snow cover conditions and avalanche danger:** Local thunderstorms are expected in the afternoon today. Increasing daytime temperatures and the cloud cover favor a rapid weakening of the superficial layer of the snowpack, especially below 2000m. Throughout the entire territory, avalanche danger is 2 (moderate). On several steep slopes, at all exposures, chance of small- and medium-sized wet avalanches. Wet-snow avalanches can be triggered by the passage of single skiers-hikers. At the highest altitudes of the tallest ranges, in areas with wind-drifted accumulations and on steep slopes on northern exposures, triggered medium-sized slab avalanches can still occur, mainly with high overload.

Forecast for Saturday 08 May 2021, reliability: 80%

**Starting in the afternoon, risk of wet-snow avalanches, due to increasing temperatures.**

Alpi Carniche occ., Prealpi Carniche occ., Prealpi Carniche orient., Alpi Carniche orient., Alpi Giulie, M. Canin, Prealpi Giulie

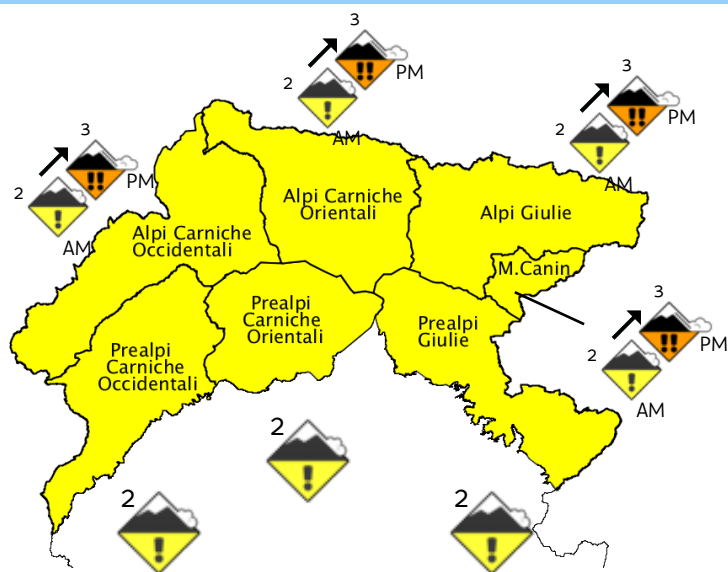

Thermal Zero: 2000 m  
T.average 1000: 7 °C  
T.average 2000: 0 °C

**Weather by OSMER - ARPA FVG:**  
Clear to partly cloudy skies. From the afternoon, sharply increasing temperatures at high altitudes.

**Snow cover conditions and avalanche danger:** Slightly cloudy skies. Throughout the entire territory, avalanche danger will be 1 (low) in the morning, increasing to 2 (moderate) by the afternoon. The expected rise in temperature may favor natural triggered small- and medium-sized wet-snow avalanches on steep slopes at all exposures. In the morning, on very steep slopes above 2000 m, in areas with wind-blown accumulations at all exposures, chance of triggered slab avalanches, mainly with high overload. The most dangerous slopes will be those the highest altitudes of the tallest ranges, and especially on northern exposures. Also take into account that, during the warmest hours on steep slopes, wet-snow avalanches can be triggered with the passage of single skiers-hikers.

Forecast for Sunday 09 May 2021, reliability: 80%

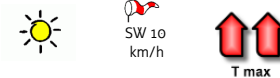

Chance of wet-snow avalanches, both natural and triggered, with the passage of single skiers-hikers.

Alpi Carniche occ., Alpi Carniche orient., Alpi Giulie, M. Canin

Prealpi Carniche occ., Prealpi Carniche orient., Prealpi Giulie

Thermal Zero: 3500 m  
T.average 1000: 10 °C  
T.average 2000: 6 °C

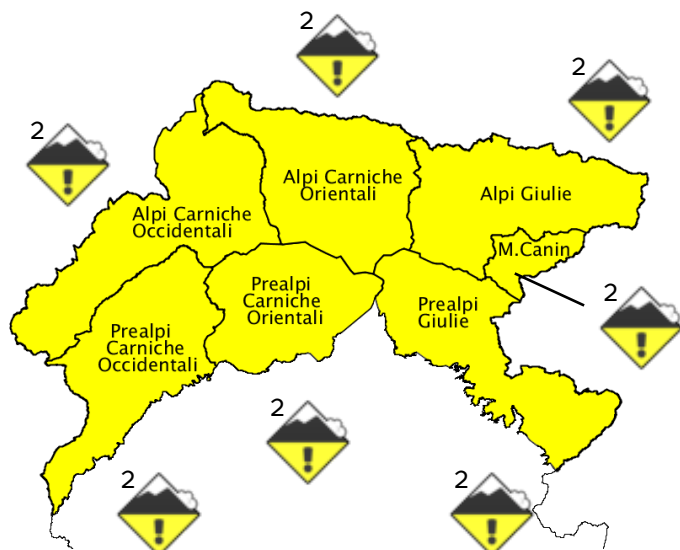

**Weather by OSMER - ARPA FVG:**

Generally clear skies. In the afternoon, chance of local cloud cover. Freezing point at 3500 m.

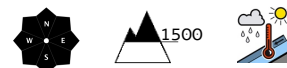

**Snow cover conditions and avalanche danger:** Good weather expected with a significant rise in temperatures. Freezing point at 3500 m. In the Alps, avalanche danger will be 2 (moderate,) increasing to 3 (considerable) from late morning. The high temperatures will not allow for the superficial layers of the snowpack to freeze. Starting in the morning, on steep slopes of all exposures, chance of natural wet-snow avalanches will gradually increase, even at high altitudes. The same can also occur with the passage of single skiers-hikers, as well as locally from ledges. Avalanche phenomena may also be large in size. On the Pre-Alps, avalanche danger will be 2 (moderate). In the morning, on steep slopes at all exposures, chance of natural triggered wet-snow avalanches, even with the passage of single skiers-hikers. Avalanche phenomena will generally be of medium size.

Forecast for Monday 10 May 2021, reliability: 70%

Chance of wet-snow avalanches, both natural and triggered, due to passage of single hikers-skiers.

Alpi Carniche occ., Prealpi Carniche occ., Prealpi Carniche orient., Alpi Carniche orient., Alpi Giulie, M. Canin, Prealpi Giulie

Thermal Zero: 3500 m  
T.average 1000: 12 °C  
T.average 2000: 6 °C

**Weather by OSMER - ARPA FVG:**

Generally clear skies. In the afternoon, chance of local cloud cover. Freezing point at 3500 m.

**Snow cover conditions and avalanche danger:** Cloudy skies with continued high temperatures. Throughout the entire territory, avalanche danger will be 2 (moderate). Despite the good weather, the freezing of the superficial layer of the snowpack will be of little significance. Starting in the morning, on steep slopes at all exposures, the chance of natural wet-snow avalanches will gradually increase, even at high altitudes. On steep slopes, wet-snow avalanches may be triggered by the passage of single skiers-hikers. In the Alps, chance of snow from ledges on an isolated level. The expected avalanche phenomena will be medium in size and occasionally large in the Alps.
