AVALANCHE BULLETIN n.3 the 01 December 2021

Situation of 01 December 2021 edition of the hours 14-next update 03-12-2021 hours 14, forecaster: MA

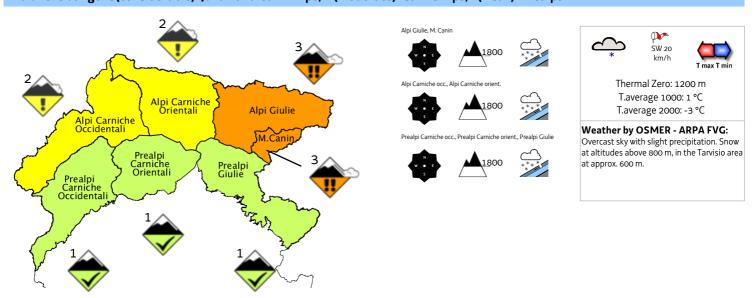

reliability: 80%

Avalanche danger 3 (considerable): Canin Alps, 2 (moderate): Alps, 1 (weak): Prealps.

Snow cover conditions and avalanche danger: Mostly clear or partly cloudy skies, with slightly rising temperatures. In the Canin area, avalanche danger is3 (considerable). Generally above 1800 m, at all exposures, in areas with wind-blown accumulations, especially under ridges, passes, and along gullies, a chance of medium-sized slab avalanches, especially withhigh overload, is not excluded. On steep slopes, even with low overload. In the Alps, avalanche danger is 2(moderate). Above approximately 1800 m, in areas with wind-blown accumulations, small- and medium-sized triggered avalanches are possible, mainly with a high overload, not excluded locally with low overload on steep slopes. In the Pre-Alps, avalanche danger is 1 (low). On higher slopes, chance of small triggered avalanches, mainly with a high overload.

Forecast for Thursday 02 December 2021, reliability: 70% Avalanche danger 3(considerable): Julian and Canin Alps, 2 (moderate): Carnic Alps, 1(weak): Prealps

Snow cover conditions and avalanche danger: New snowfall expected, to the east (10-25 cm), minor ones to the west (2-10 cm). New snow and old wind-blown accumulations already present at high altitudes will be the main source of danger. On the Alps, CaninAlps, and Julian Pre-Alps, avalanche danger will be 3 (considerable). Above approximately 1800 m, chanceof both small- and medium sized natural avalanches from very steep slopes, as well as medium-sizedtriggered avalanches and, in some cases, large ones on steep slopes. with weak overload. On the CarnicAlps, avalanche danger will be 2 (moderate). On high slopes, small natural, fresh-snow avalanches andsmall- and medium-size triggered avalanches will be possible, mainly with low overload, locally with high overload. On the Pre-Alps, avalanche danger will be 1 (low). On higher slopes, chance of small avalanches, both natural and triggered, with high overload.

AVALANCHE BULLETIN n.3 the 01 December 2021

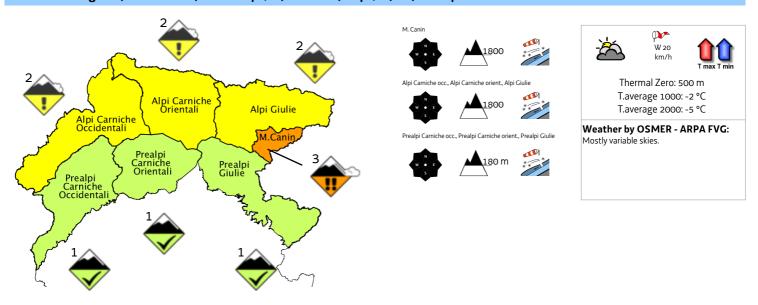

Forecast for Friday 03 December 2021, reliability: 60% Avalanche danger 3 (considerable): Canin Alps, 2 (moderate): Alps .1 (low): Prealps.

Snow cover conditions and avalanche danger: Clear skies and falling temperatures. The forecasted wind may favor the formation of new accumulations. In the Canin area, avalanche danger will be 3 (considerable). Generally above approximately 1800 m, at allexposures, in areas of wind-blown accumulations located especially under ridges, passes, and along gullies, a chance of medium-sized slab avalanches, especially with high overload, is not excluded. On steep slopes, even with low overload. In the Alps, avalanche danger will be 2 (moderate). On high slopes, small- and, insome cases, even medium-sized avalanches will be possible, the latter generally with high local overload, and even with low overload. Natural avalanche activity is not excluded. On the Prealps, avalanche dangered avalanches mainly with high overload.

Forecast for Saturday 04 December 2021, reliability: 60% Avalanche danger 3 (considerable): Canin Alps, 2 (moderate): Alps, 1 (low): Prealps.

Snow cover conditions and avalanche danger: Mostly variable skies. In the Canin area, avalanche danger will be 3 (considerable). Generally aboveapproximately 1800 m, at all exposures, in areas of wind-blown accumulations, located especially underridges, passes, and along the gullies, a chance of medium-sized slab avalanches, especially with highoverload, is not excluded. On steep slopes, even with low overload. In the Alps, avalanche danger will be 2 (moderate). On high slopes, small- and, in some cases, even medium-sized avalanches will be possible, thelatter generally with high local overload, and even with low overload. On the Prealps, avalanche danger willbe 1 (low), On higher slopes, chance of small triggered avalanches, mainly with a high overload.
