

Situation of 09 December 2021 edition of the hours 14-next update 10-12-2021 hours 14, forecaster: MM

reliability: 80%

Danger 4 (strong) Julian Alps and Canin; 3 (marked) Carnic Alps and Pre-Alps.

Alpi Giulie, M. Canin

Alpi Carniche occ., Prealpi Carniche occ., Prealpi Carniche orient., Alpi Carniche orient., Prealpi Giulie

N 40
km/h

Thermal Zero: 1000 m
T.average 1000: 0 °C
T.average 2000: -5 °C

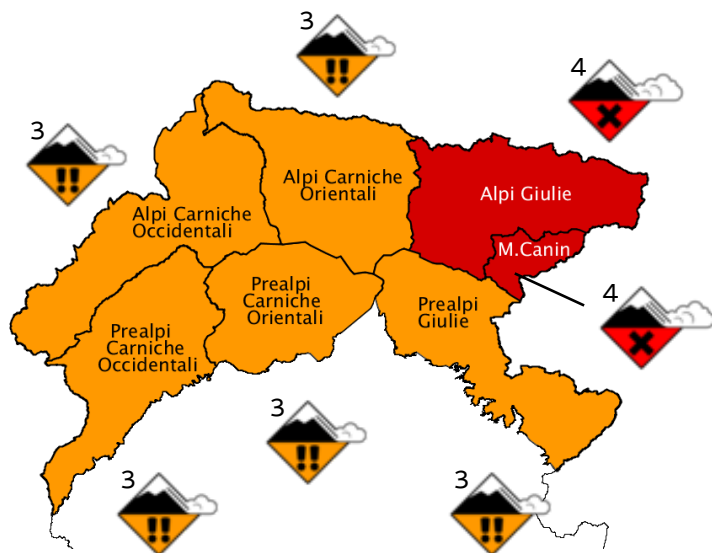

Weather by OSMER - ARPA FVG:
Overcast with residual light to moderate precipitation. Winds aloft from the NNE.

Station	quota (m)	snow depth (cm)	fresh snow (cm)	Tmin (°C)	Tmax (°C)
RIFUGIO TAMAI - ZONCOLAN	1750	79	35	-3	-3
VARMOST M.TE SIMONE	1870	76	35	-5	-4
SELLA NEVEA - LIVINAL LUNC	1837	157	46	-7	-3
PIANCAVALLO	1280	80	52	-5	-1
TARVISIO	800	60	38	-6	-2

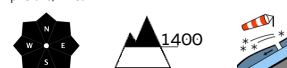

Snow cover conditions and avalanche danger: Abundant snowfall affected the mountainous terrain including the valley floors. The snowpack is weakly consolidated on most of the steep slopes due to the presence of new and old accumulations of unstable wind snow. On Alpi Giulie and Canin the avalanche danger is 4 (strong): even below the forest line on steep slopes at all exposures, even large avalanches are probable, both spontaneous and triggered, the latter already with a weak overload. In the Carnic Alps and Pre-Alps, the avalanche danger is 3 (marked): even below the forest line on steep slopes at all exposures, medium-sized avalanches are possible, both spontaneous and triggered, the latter usually with a strong overload. Local avalanches are not excluded even with a weak overload and of bigger dimensions. Detachments are also possible everywhere and the involvement of the road network normally subject to avalanches is usually over 1000 m. Translated with www.DeepL.com/Translator (free version)

Forecast for Friday 10 December 2021, reliability: 70%

Danger 4 (strong) Julian Alps and Canin; 3 (marked) Carnic Alps and Pre-Alps.

Alpi Giulie, M. Canin

Alpi Carniche occ., Prealpi Carniche occ., Prealpi Carniche orient., Alpi Carniche orient., Prealpi Giulie

SW 20
km/h

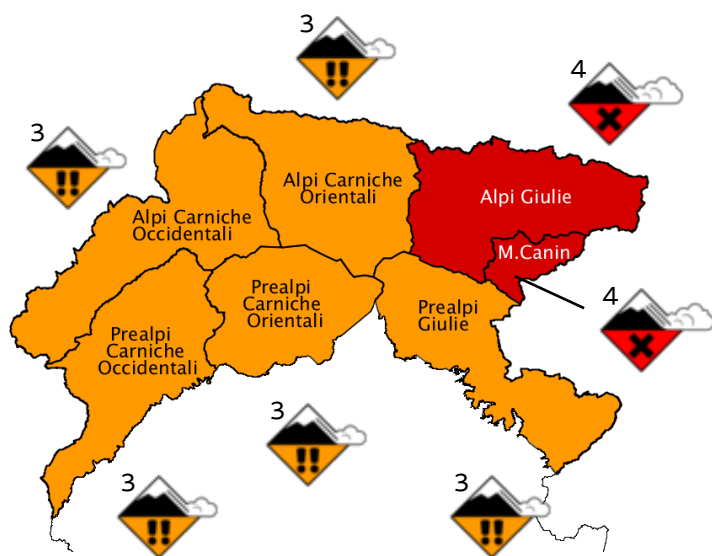

Thermal Zero: 700 m
T.average 1000: -2 °C
T.average 2000: -8 °C

Weather by OSMER - ARPA FVG:
Partly cloudy in the morning, then overcast.

Snow cover conditions and avalanche danger: Cloudy skies. The snowpack will be still weakly consolidated on most of the steep slopes due to the presence of unstable snow accumulations of old and new snow. On Alpi Giulie and Canin the avalanche danger will be 4 (strong): even below the wood's limit on steep slopes at all expositions, even big avalanches will be probable both spontaneous and provoked, the latter already with a weak overload. On the Carnic Alps and Pre-Alps, the avalanche danger will be 3 (marked): even below the forest limit on steep slopes at all exposures, medium-sized avalanches will be possible both spontaneous and triggered, the latter usually with a strong overload. Locally we don't exclude detachments also with a weak overload and bigger dimensions. Detachments are also possible everywhere and the involvement of the road network normally subject to avalanches usually over 1000 m. Translated with www.DeepL.com/Translator (free version)

Forecast for Saturday 11 December 2021, reliability: 70%

Danger 4 (strong) Julian Alps and Canin; 3 (marked) Carnic Alps and Pre-Alps.

Alpi Giulie, M. Canin

Alpi Carniche occ., Prealpi Carniche occ., Prealpi Carniche orient., Alpi Carniche orient., Prealpi Giulie

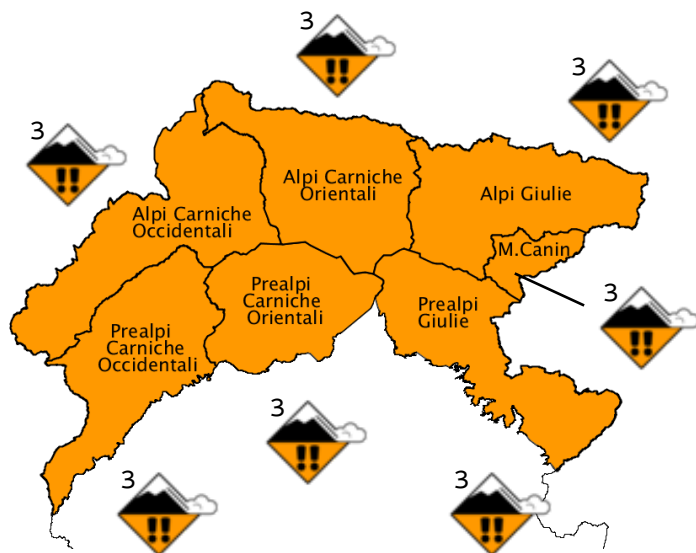

Thermal Zero: 800 m
T.average 1000: -2 °C
T.average 2000: -5 °C

Weather by OSMER - ARPA FVG:
Clear to partly cloudy with sustained north winds aloft.

Snow cover conditions and avalanche danger: Clear or slightly cloudy sky with a strong wind from N at high altitude that could cause the formation of new accumulations, so the snowpack will be still weakly consolidated on most of the slopes. On Alpi Giulie and Canin the avalanche danger will be 4 (strong): even under the wood's limit on steep slopes at all expositions, large avalanches will be probable both spontaneous and provoked, the latter already with a weak overload. On the Carnic Alps and Pre-Alps, the avalanche danger will be 3 (marked): even below the forest limit on steep slopes at all exposures, medium-sized avalanches will be possible both spontaneous and triggered, the latter usually with a strong overload. Locally we don't exclude detachments also with a weak overload and bigger dimensions. Detachments are also possible everywhere and the involvement of roads normally subject to avalanches especially at high altitude. Translated with www.DeepL.com/Translator (free version)

Forecast for Sunday 12 December 2021, reliability: 60%

Danger 3 (marked) in the Alps and Pre-Alps

Alpi Carniche occ., Prealpi Carniche occ., Prealpi Carniche orient., Alpi Carniche orient., Alpi Giulie, M. Canin, Prealpi Giulie

Thermal Zero: 800 m
T.average 1000: -1 °C
T.average 2000: -5 °C

Weather by OSMER - ARPA FVG:
Clear or Partly Cloudy.

Snow cover conditions and avalanche danger: Clear sky, the snowpack will slowly consolidate even if especially at high altitude there will be unstable accumulations of windy snow. In the Alps and Prealps the avalanche danger will be 3 (marked): generally above the wood's limit on steep slopes at all exposures, medium and even big avalanches will be possible both spontaneous and provoked, the latter in particular on the higher slopes even with a weak overload. Locally larger detachments are not excluded. Everywhere, but especially on the sunniest slopes of the steep parts, avalanches are possible.
