

Situation of 10 December 2021 edition of the hours 14-next update 13-12-2021 hours 14, forecaster: MM

reliability: 80%

Avalanche danger 4 (high): Julian Alps, Canin area; 3 (considerable): Carnic Alps and Prealps.

Alpi Giulie, M. Canin

Alpi Carniche occ., Prealpi Carniche occ., Prealpi Carniche orient., Alpi Carniche orient., Prealpi Giulie

Thermal Zero: 800 m
T.average 1000: -2 °C
T.average 2000: -8 °C

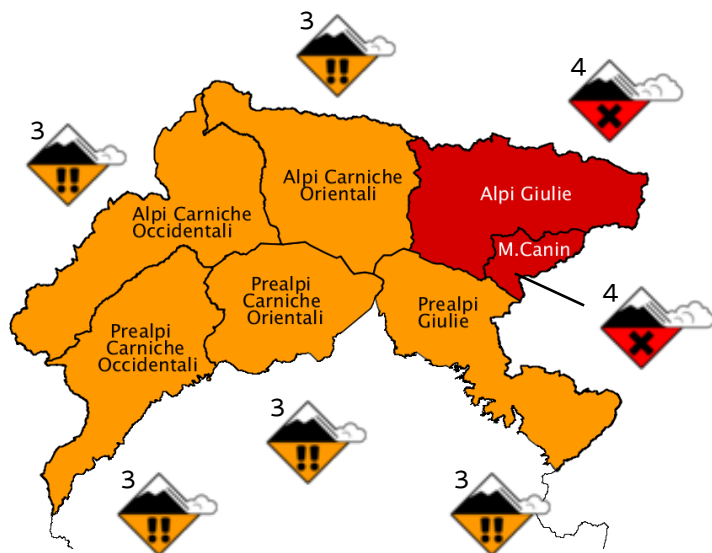

Weather by OSMER - ARPA FVG:
In the morning, partly cloudy then overcast.

Station	quota (m)	snow depth (cm)	fresh snow (cm)	Tmin (°C)	Tmax (°C)
RIFUGIO TAMAI - ZONCOLAN	1750	73	3	-8	-5
VARMOST M.TE SIMONE	1870	72	3	-8	-5
SELLA NEVEA - LIVINAL LUNC	1837	155	6	-7	-5
PIANCAVALLO	1280	72	3	-7	-1
TARVISIO	800	65	9	-7	-2

Snow cover conditions and avalanche danger: Cloudy to overcast skies. The snowpack is weakly consolidated on most steep slopes, due to the presence of new and old unstable wind-blown accumulations. On the Julian Alps and Canin area, avalanche danger is 4 (high), also under the tree line on steep slopes at all exposures, chance of both natural and triggered avalanches, even large-sized, is likely, the latter even with low overload. On the Carnic Alps and Prealps, avalanche danger is 3 (considerable), even below the treeline on steep slopes at all exposures, chance of both natural and triggered avalanches of medium size, the latter generally with a high overload. Locally, avalanches are not excluded, even with a low overload and of a large size. Triggered ground avalanches are also possible throughout the territory, also involving roads that are normally subject to avalanches, generally above 1000 m.

Forecast for Saturday 11 December 2021, reliability: 70%

Avalanche danger 4 (high): Julian Alps and Canin area; 3 (considerable): on Carnic Alps and Prealps.

Alpi Giulie, M. Canin

Alpi Carniche occ., Prealpi Carniche occ., Prealpi Carniche orient., Alpi Carniche orient., Prealpi Giulie

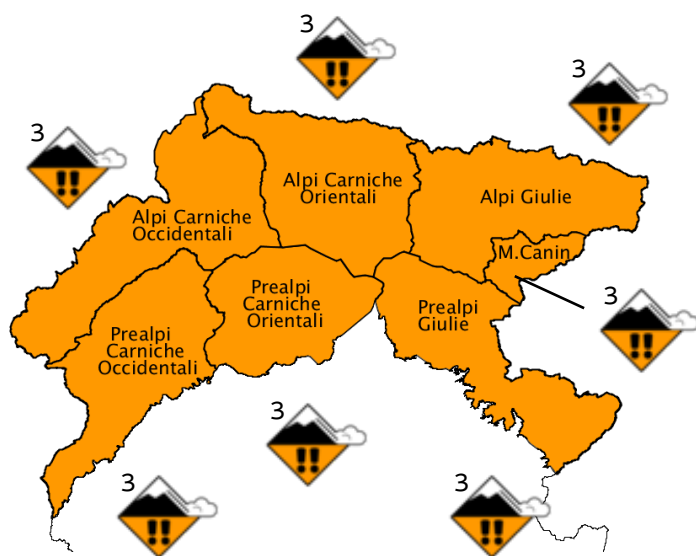

Thermal Zero: 800 m
T.average 1000: -2 °C
T.average 2000: -6 °C

Weather by OSMER - ARPA FVG:
Clear or partly cloudy skies, wind from the north at high altitudes.

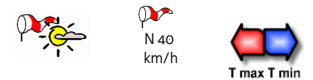

Snow cover conditions and avalanche danger: Cloudy skies. The snowpack will still be weakly consolidated on most of the steep slopes, due to the presence of old and new, unstable wind-blown accumulations. On the Julian Alps and in the Canin area, avalanche danger will be 4 (high), also under the tree line on steep slopes at all exposures, chance of avalanches, even large in size, both natural and triggered, the latter even with a low overload. On the Carnic Alps and Prealps, avalanche danger will be 3 (considerable), even below the treeline on steep slopes at all exposures, chance of both natural and triggered avalanches of medium size is likely, the latter generally with a high overload. Locally, avalanches are not excluded, even with a low overload and of a larger size. Triggered ground avalanches are also possible throughout the territory, also involving roads that are normally subject to avalanches, especially at higher altitudes.

Forecast for Sunday 12 December 2021, reliability: 70%

Avalanche danger 3 (considerable) in the Alps and Prealps.

Alpi Carniche occ., Prealpi Carniche occ., Prealpi Carniche orient., Alpi Carniche orient., Alpi Giulie, M. Canin, Prealpi Giulie

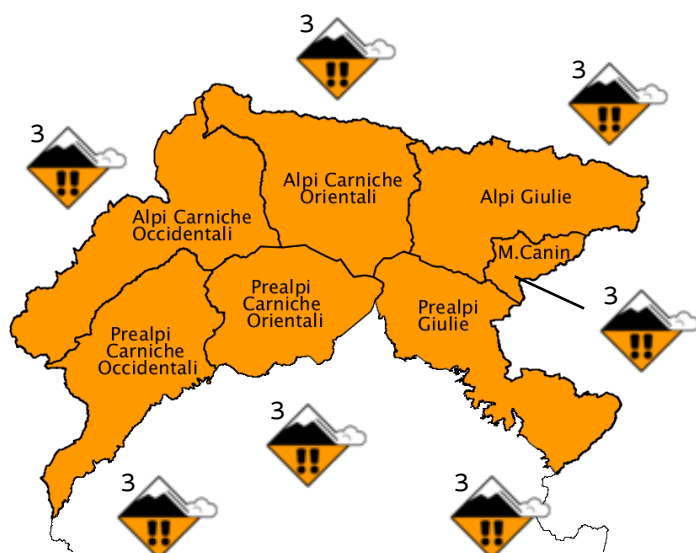

Thermal Zero: 1200 m
T.average 1000: -1 °C
T.average 2000: -3 °C

Weather by OSMER - ARPA FVG:
Cloudy skies and moderate north wind at high altitudes.

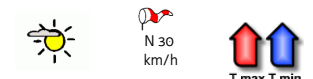

Snow cover conditions and avalanche danger: Clear skies. The snowpack will slowly tend to consolidate, even if the presence of unstable wind-blown accumulations will remain, especially at high altitudes. On the Alps and Prealps, avalanche danger will be 3 (considerable), generally above the treeline on steep slopes at all exposures, chance of triggered medium- and large-sized avalanches, even with low overload on higher slopes. Locally, larger-sized avalanches are not excluded. Natural activity will generally be decreasing. Throughout the territory, but especially on the sunnier sides of steep grassy slopes, triggered ground avalanches will also be possible.

Forecast for Monday 13 December 2021, reliability: 70%

Avalanche danger 3 (considerable) in the Alps and Prealps.

Alpi Carniche occ., Prealpi Carniche occ., Prealpi Carniche orient., Alpi Carniche orient., Alpi Giulie, M. Canin, Prealpi Giulie

Thermal Zero: 2500 m
T.average 1000: 2 °C
T.average 2000: 3 °C

Weather by OSMER - ARPA FVG:
Slightly cloudy skies.

Snow cover conditions and avalanche danger: Clear skies with rising temperatures that could cause an increase in natural avalanche activity, particularly on slopes more exposed to the sun and near rocky areas. Especially at high altitudes, the presence of unstable wind-blown accumulations will remain. On the Alps and Prealps, avalanche danger will be 3 (considerable). Generally above the treeline on steep slopes at all exposures, medium- and large-sized avalanches will be possible, both natural and triggered, the latter especially on steeper slopes, even with a low overload. Locally, larger avalanches are not excluded. Throughout the territory, but especially on the sunnier sides of steep grassy slopes, triggered ground avalanches will also be possible.
