

Situation of 13 December 2021 edition of the hours 14-next update 15-12-2021 hours 14, forecaster: GA

reliability: 80%

Avalanche danger 2 (moderate), due to the presence of locally unstable wind-blown accumulations.

Alpi Carniche occ., Prealpi Carniche occ., Prealpi Carniche orient., Alpi Carniche orient., Alpi Giulie, M. Canin, Prealpi Giulie

Thermal Zero: 2400 m
T.average 1000: 5 °C
T.average 2000: 2 °C

Weather by OSMER - ARPA FVG:

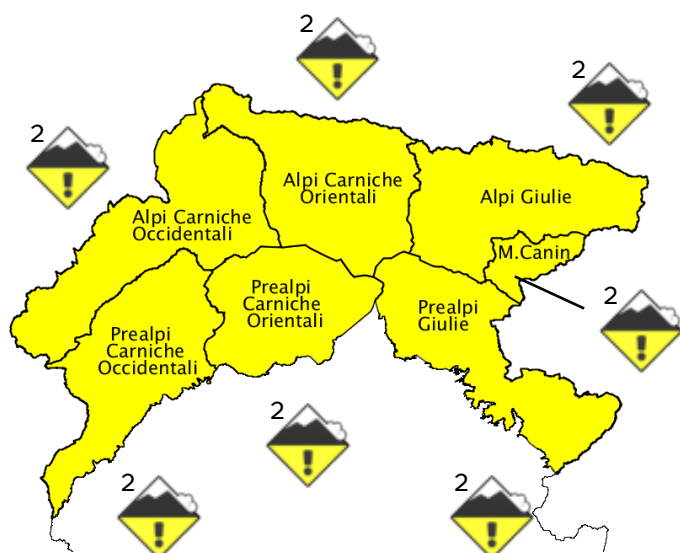

Variable skies, freezing over 2000 m, overnight temperature inversion in valleys.

Station	quota (m)	snow depth (cm)	fresh snow (cm)	Tmin (°C)	Tmax (°C)
RIFUGIO TAMAI - ZONCOLAN	1750	60	0	-2	6
VARMOST M.TE SIMONE	1870	59	0	-2	5
SELLA NEVEA - LIVINAL LUNC	1837	139	0	-4	5
PIANCAVALLO	1280	61	0	-4	4
TARVISIO	800	52	0	-4	0

Snow cover conditions and avalanche danger: The snowpack has been shuffled by the wind. At high altitudes, large eroded areas, even with uncovered ground, alternate with wind-blown accumulation areas, even substantial in size. The accumulations are variable in hardness: soft in areas most sheltered from the wind and very hard in areas where they were more greatly compacted. Avalanche danger is 2 (moderate) throughout the entire mountain territory. In areas with wind-blown accumulations, in hollows, gullies, and near ridges and passes, chance of triggered slab avalanches, generally of medium size, and mainly with high overload. On extreme slopes, the possibility that locally triggered avalanches may occur, even with low overload, especially above 2000 m, is not excluded. On southern and western slopes, during warmer hours, natural, wet-snow triggered avalanches of small and medium-size are possible, along with slip avalanches on steep grassy slopes.

Forecast for Tuesday 14 December 2021, reliability: 80%

Avalanche danger 2 (moderate), due to the presence of locally, unstable wind-blown accumulations.

Alpi Carniche occ., Prealpi Carniche occ., Prealpi Carniche orient., Alpi Carniche orient., Alpi Giulie, M. Canin, Prealpi Giulie

Thermal Zero: 2500 m
T.average 1000: 4 °C
T.average 2000: 2 °C

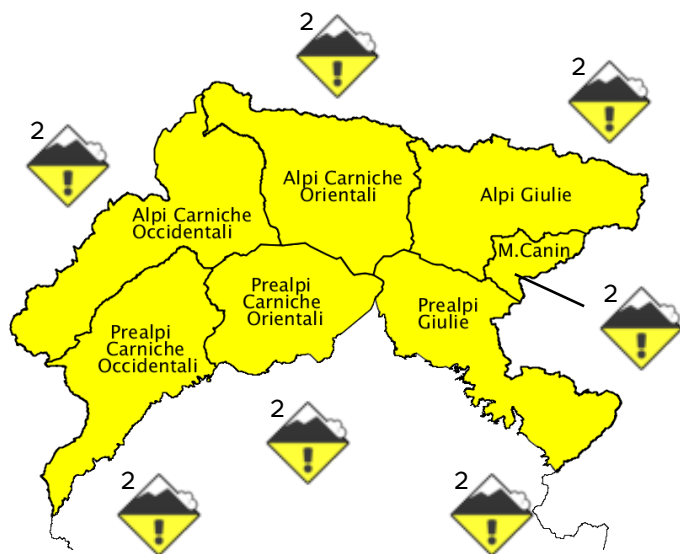

Weather by OSMER - ARPA FVG:

In the morning, mostly clear skies, partly cloudy in the afternoon. Marked inversion in temperature.

Snow cover conditions and avalanche danger: Clear to partly cloudy skies and freezing temperatures at 2500 m. Avalanche danger will be 2 (moderate) throughout the entire mountain territory. In areas characterized by wind-blown accumulations, generally easily recognizable by experts, present in hollows in gullies and in the vicinity of crests and passes, chance of triggered medium-sized slab avalanches, mainly with high overload. On extreme slopes, triggered avalanches can occur locally, also with low overload, especially above 2000 m. During warmer hours, natural, triggered wet-snow avalanches of small- and medium size, both loose and slab, will be possible on southern slopes. Small- and medium-sized slip avalanches will also be possible on steep grassy slopes, especially in the Pre-Alps.

Forecast for Wednesday 15 December 2021, reliability: 80%

Avalanche danger 2 (moderate), due to the presence of locally unstable wind-blown accumulations.

T.average 2000: 0 °C

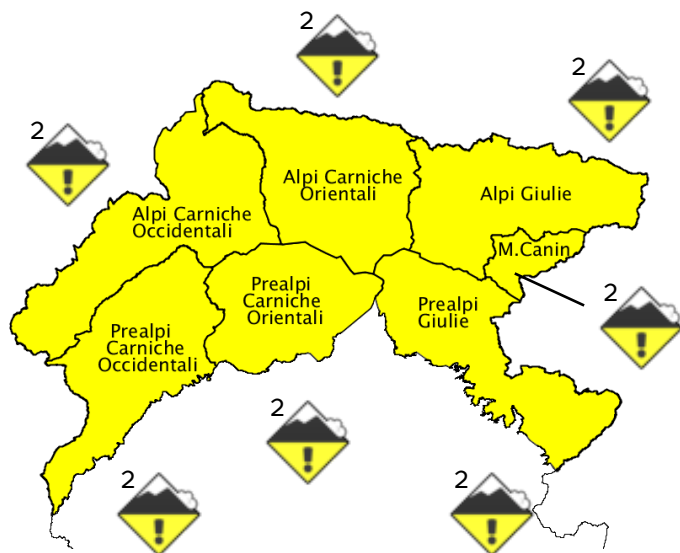

Weather by OSMER - ARPA FVG:

In the morning, mostly clear skies, partly cloudy during the day. At high altitudes, moderate NE wind.

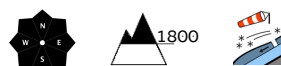

Snow cover conditions and avalanche danger: Clear to partly cloudy skies and freezing temperatures at 2000 m. Avalanche danger will be 2(moderate) throughout the entire mountain territory. In areas characterized by wind-blown accumulations, present in hollows in gullies and in the vicinity of crests and passes, chance of triggered medium-sized slab avalanches, mainly with high overload. On extreme slopes, triggered avalanches can occur locally, even with low overload, especially in shaded areas and above 2000 m. During warmer hot hours, small, natural wet-snow avalanches, and several small slip avalanches on very steep grassy slopes, will be possible on southern slopes.

Forecast for Thursday 16 December 2021, reliability: 70%

Avalanche danger 2 (moderate), due to the presence of locally unstable wind-blown accumulations.

T.average 1000: 1 °C
T.average 2000: 2 °C

Weather by OSMER - ARPA FVG:

Slightly cloudy skies.

Snow cover conditions and avalanche danger: Cloudy skies and freezing temperatures rising at 2500 m. Avalanche danger will be 2 (moderate) throughout the entire mountain territory. In areas characterized by wind-blown accumulations, present in hollows in gullies and in the vicinity of crests and passes, chance of triggered slab avalanches of medium-size, mainly with high overload. On extreme slopes, triggered avalanches can occur locally, even with low overload, especially above 2000 m. During warmer hours, natural wet-snow, triggered avalanches, small and medium in size, both loose and slab, will be possible on southern slopes. Small- and medium-sized slip avalanches will also be possible on steep grassy slopes, especially in the Pre-Alps.
