

Situation of 07 January 2022 edition of the hours 14-next update 10-01-2022 hours 14, forecaster: MM

reliability: 80%

Chance of triggered avalanches even with low overload.

Alpi Carniche occ., Prealpi Carniche occ., Prealpi Carniche orient., Alpi Carniche orient., Alpi Giulie, M. Canin, Prealpi Giulie

Thermal Zero: 500 m
T.average 1000: -6 °C
T.average 2000: -8 °C

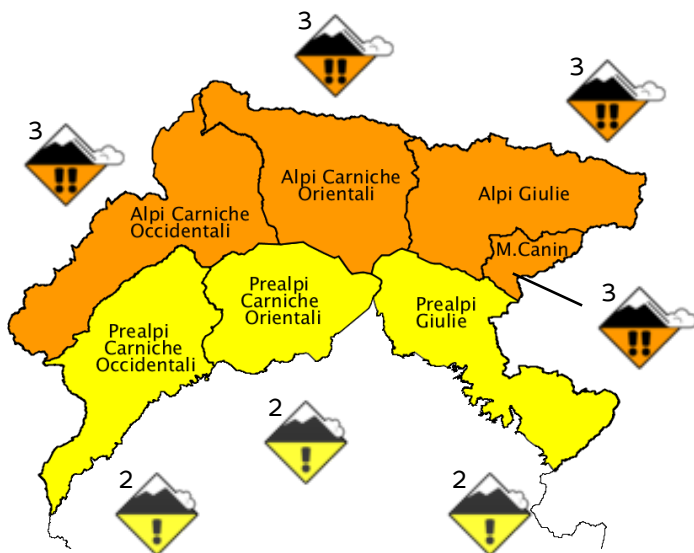

Weather by OSMER - ARPA FVG:
Clear skies and low temperatures.

Station	quota (m)	snow depth (cm)	fresh snow (cm)	Tmin (°C)	Tmax (°C)
PIANCAVALLO	1280	40	0	-10	0
TARVISIO	800	55	0	-5	3
SELLA NEVEA - LIVINAL LUNC	1837	164	0	-12	-8
RIFUGIO TAMAI - ZONCOLAN	1750	69	0	-9	-4
VARMOST M.TE SIMONE	1870	78	0	-11	-4

Snow cover conditions and avalanche danger: Clear skies and falling temperatures. Due to recent snowfall, the snowpack is moderately consolidated on many steep slopes, especially in areas where snow has not yet detached and where wind has caused the formation of unstable snow accumulations. The most dangerous areas are, therefore, found under ridges, passes, and along gullies. Avalanche danger is 3 (considerable) throughout the mountain area. Generally, above the treeline, at all exposures on steep slopes, chance of triggered avalanches even with the passage of single skiers and hikers. Natural avalanches from very steep slopes from which snow has not yet detached are still possible. Avalanches may generally be medium-sized, with larger ones not excluded on a local level, especially in the Julian Alps and Canin area, where recent snowfalls have been more abundant.

Forecast for Saturday 08 January 2022, reliability: 70%

Chance of triggered avalanches even with low overload.

Alpi Carniche occ., Alpi Carniche orient., Alpi Giulie, M. Canin

Prealpi Carniche occ., Prealpi Carniche orient., Prealpi Giulie

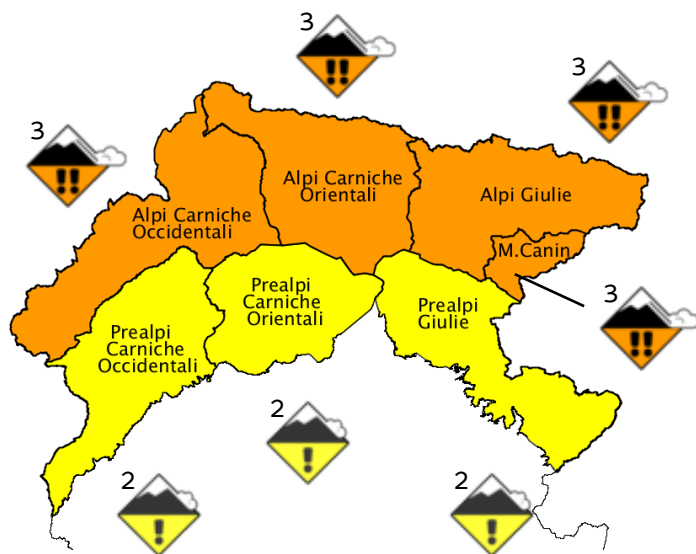

Thermal Zero: 700 m
T.average 1000: -3 °C
T.average 2000: -7 °C

Weather by OSMER - ARPA FVG:
Cloudy skies and cold temperatures.

Snow cover conditions and avalanche danger: Slightly cloudy with very low temperatures that will favor the formation of weak layers within the snowpack, especially under slabs formed by the wind, which will represent the greatest source of avalanche danger. The most dangerous areas, therefore, will be found under ridges, passes, and along gullies. Avalanche danger will be 3 (considerable) on the Alps and in the Canin area. Generally, beyond the tree line, at all exposures on steep slopes, chance of triggered avalanches even with the passage of single skiers and hikers. Avalanches may generally be medium-sized, with larger ones not excluded on a local level, especially in the Julian Alps and in the Canin area. Avalanche danger will be 2 (moderate) in the Prealps. Generally, above the treeline, at all exposures on steep slopes, chance of triggered small- and medium-sized avalanches, mainly with high overload. Natural avalanches will be limited throughout the territory.

Forecast for Sunday 09 January 2022, reliability: 70%

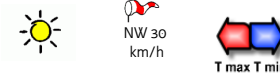

In the Alps and Canin are, chance of triggered avalanches even with low overload.

Alpi Carniche occ., Alpi Carniche orient., Alpi Giulie, M. Canin

Prealpi Carniche occ., Prealpi Carniche orient., Prealpi Giulie

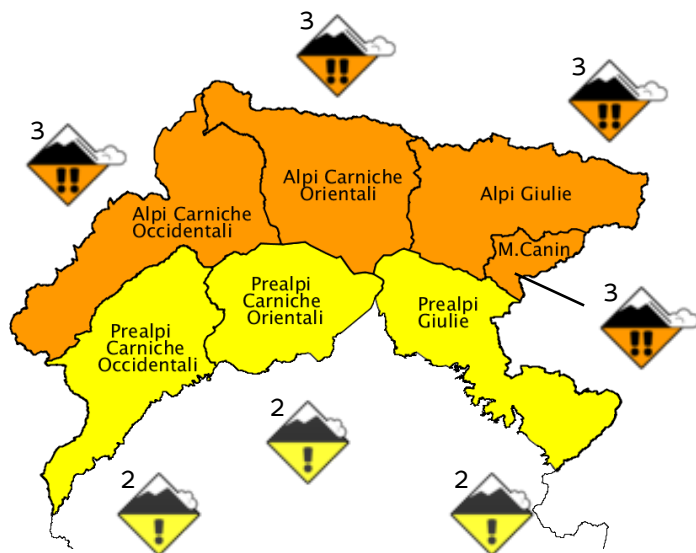

Thermal Zero: 700 m
T.average 1000: -4 °C
T.average 2000: -8 °C

Weather by OSMER - ARPA FVG:
Overcast skies and cold temperatures.
Chance of weak snowfall, especially on the Julian Alps.

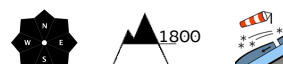

Snow cover conditions and avalanche danger: Overcast skies and cold temperatures, which will further favor the formation of weak layers within the snowpack, especially under slabs formed by wind, which will represent the greatest source of avalanche danger. Chance of weak snowfall, which could make dangerous areas less visible. Avalanche danger will be 3 (considerable) on the Alps and in the Canin area. Generally, beyond the tree line, at all exposures on steep slopes, chance of triggered avalanches even with the passage of single skiers and hikers. Avalanches may generally be medium-sized, with larger ones not excluded on a local level, especially in the Julian Alps and Canin area. Avalanche danger will be 2 (moderate) in the Prealps. Generally, above the treeline, at all exposures on steep slopes, chance of triggered small- and medium-sized avalanches, mainly with high overload. Natural avalanches will be limited throughout the territory.

Forecast for Monday 10 January 2022, reliability: 60%

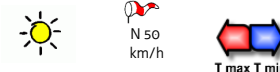

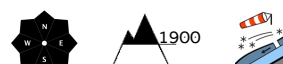

In the Alps and Canin area, chance of triggered avalanches even with low overload.

Alpi Carniche occ., Alpi Carniche orient., Alpi Giulie, M. Canin

Prealpi Carniche occ., Prealpi Carniche orient., Prealpi Giulie

Thermal Zero: 800 m
T.average 1000: -2 °C
T.average 2000: -7 °C

Weather by OSMER - ARPA FVG:
Variable skies with NE winds at high altitudes.

Snow cover conditions and avalanche danger: Variable skies with wind at high altitudes, which may cause further unstable snow accumulations, especially along gullies, and in passes and ridges. Low temperatures will still favor the formation of weak layers. Avalanche danger will be 3 (considerable) on the Alps and in the Canin area. Generally, beyond the tree line, at all exposures on steep slopes, chance of triggered avalanches even with the passage of single skiers and hikers. Avalanches may generally be medium-sized, with larger ones not excluded on a local level, especially in the Julian Alps and Canin area. Avalanche danger will be 2 (moderate) in the Prealps. Generally, above the treeline, at all exposures on steep slopes, chance of triggered small- and medium-sized avalanches, mainly with high overload. Natural avalanches will be limited throughout the territory.
