Snow cover conditions and avalanche danger: Variable skies with a slight drop in temperatures. The snowpack is generally stable and well consolidated on most slopes. In shadier areas, hard and frozen snow slabs and loose artificial snow present. In the south, where the snowpack is characterized by layers, snow is almost absent in the Prealps. Avalanche danger is 1 (low) throughout the territory. At high altitudes, on very steep slopes, with the presence of wind-blown snow accumulations, in localized areas, and especially at northern exposures, chance of triggered small avalanches, mainly with high overload. Beware of areas with hard or frozen snow. Assess risk of slipping and falling.

Forecast for Tuesday 01 February 2022, reliability: 80%

Strong NW wind at high altitudes with chance of new wind-blown accumulations.

Weather by OSMER - ARPA FVG:

Mostly cloudy skies at high altitudes, moderate N wind. Chance of very light snowfall during at night.

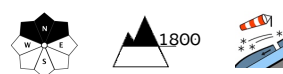

Snow cover conditions and avalanche danger: Cloudy skies with chance of several very weak precipitation, snow over approximately 400 m in the Alps and moderate to locally sustained NW wind at high altitudes, which may favor the formation of new small wind-blown snow accumulations. Avalanche danger will be 1 (low) throughout the territory. At high altitudes, on very steep slopes, with the presence of wind-blown snow accumulations, in localized areas, and especially at northern exposures, chance of triggered small avalanches, mainly with high overload. The most dangerous areas will be ridges, forks, and along very steep gullies, and also areas with little snow, where there may be gaps at the base of the old snowpack. Beware of areas with hard or frozen snow. Assess risk of slipping and falling.
