

Situation of 16 February 2022 edition of the hours 14-next update 18-02-2022 hours 14, forecaster: MM

reliability: 80%

Chance of natural and triggered avalanches, also with low overload.

Alpi Carniche occ., Prealpi Carniche occ., Prealpi Carniche orient., Alpi Carniche orient., Alpi Giulie, M. Canin, Prealpi Giulie

W 20  
km/h

Thermal Zero: 1500 m  
T.average 1000: 2 °C  
T.average 2000: -3 °C

Weather by OSMER - ARPA FVG:

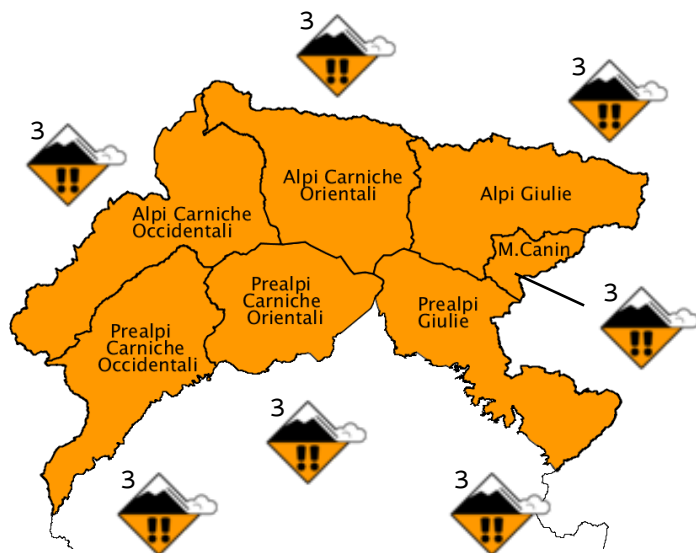

Variable cloudiness, usually more intense in the Prealps but with clearings.

Station	quota (m)	snow depth (cm)	fresh snow (cm)	Tmin (°C)	Tmax (°C)
PIANCAVALLO	1280	60	20	-4,5	1,5
TARVISIO	800	35	10	0	3
SELLA NEVEA - LIVINAL LUNC	1837	175	50	-5	0
RIFUGIO TAMAI - ZONCOLAN	1750	90	50	-4,5	-2
VARMOST M.TE SIMONE	1870	88	45	-5,5	2

**Snow cover conditions and avalanche danger:** Abundant snowfall has affected the mountain area. On average, approximately 50 cm fell in the Alps, while the quantities were less in the Prealps. The new snow deposited both on old hard layers as well as on artificial snow, both situations can favor avalanche activity. The snowpack is weakly consolidated on most slopes. Avalanche danger is 3 (considerable) throughout the territory. Generally, above the treeline, at all exposures on steep slopes, mostly medium-sized avalanches are possible, both natural and triggered, the latter on high slopes even with the passage of single skiers/hikers. Locally, larger avalanches, even below the treeline, are not excluded. On steep grassy slopes, glide avalanches are also possible, especially on the sunnier slopes.

Forecast for Thursday 17 February 2022, reliability: 70%

Temperatures rising with consequent increase in natural avalanche activity.

Alpi Carniche occ., Prealpi Carniche occ., Prealpi Carniche orient., Alpi Carniche orient., Alpi Giulie, M. Canin, Prealpi Giulie

W 40  
km/h

Thermal Zero: 2700 m  
T.average 1000: 2 °C  
T.average 2000: 5 °C

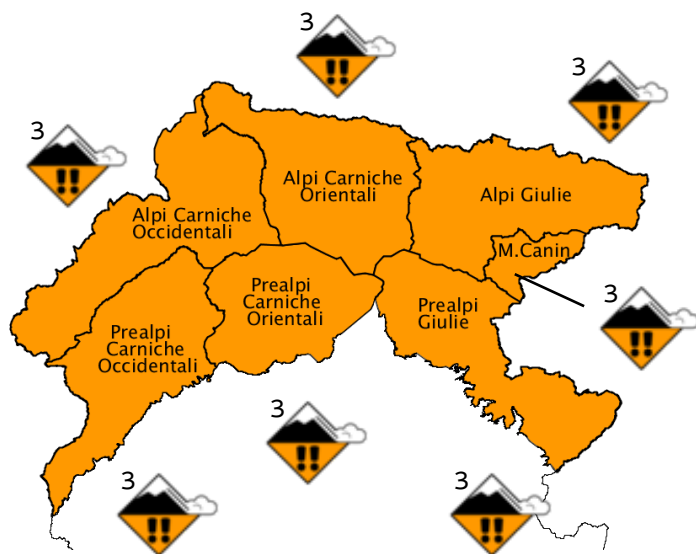

Weather by OSMER - ARPA FVG:

Generally cloudy skies, chance of cloudiness mostly in the Prealps. Freezing at almost 3000 m.

**Snow cover conditions and avalanche danger:** Variable to slightly cloudy skies with a sharp rise in temperatures, especially at high altitudes, freezing temperatures at almost 3000 m. Winds from the west at high altitudes are also expected, which could favor the formation of new wind-blown accumulations, especially near forks, along ridges, and in gullies. The snowpack will, therefore, slowly consolidate, mostly during warmer hours, and natural avalanches will increase. Avalanche danger will be 3 (considerable). Generally above the treeline, at all exposures, on steep slopes, mainly medium-sized avalanches will be possible, both natural and triggered, the latter especially on high slopes, even with the passage of single skiers/hikers. On steep grassy slopes, glide avalanches are also possible, especially on sunnier slopes.

Forecast for Friday 18 February 2022, reliability: 60%

**Temperatures rising with consequent increase in natural avalanche activity.**

Alpi Carniche occ., Prealpi Carniche occ., Prealpi Carniche orient., Alpi Carniche orient., Alpi Giulie, M. Canin, Prealpi Giulie

Thermal Zero: 2700 m  
T.average 1000: 4 °C  
T.average 2000: 0 °C

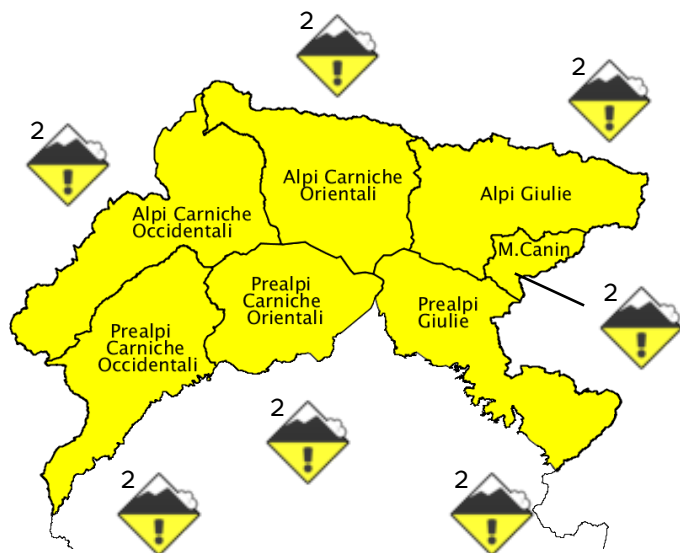

**Weather by OSMER - ARPA FVG:**

Partly cloudy skies in the Alps to variable skies in the Prealps, cloudy in the second half of the day.

**Snow cover conditions and avalanche danger:** Skies ranging from slightly cloudy in the Alps to variable in the Prealps, with more cloudcover in the second part of the day. Temperatures slightly decreasing, but still high, with freezing temperatures close to 3000 m. The snowpack will have a moderate consolidation and, especially during warmer hours, natural avalanche activity will be increasing. Avalanche danger will be 3 (considerable). Generally, above the treeline, at all exposures on steep slopes, mainly medium-sized avalanches will be possible, both natural and triggered, the latter especially on high slopes, even when the passage of single skiers/hikers. On steep grassy slopes, glide avalanches are also possible, especially on sunnier slopes.

Forecast for Saturday 19 February 2022, reliability: 60%

**Temperatures rising with consequent increase in natural avalanche activity.**

Alpi Carniche occ., Prealpi Carniche occ., Prealpi Carniche orient., Alpi Carniche orient., Alpi Giulie, M. Canin, Prealpi Giulie

Thermal Zero: 2700 m  
T.average 1000: 4 °C  
T.average 2000: -2 °C

**Weather by OSMER - ARPA FVG:**

Mostly cloudy skies, with possible weak precipitation in the evening.

**Snow cover conditions and avalanche danger:** Cloudy to overcast skies with possible weak precipitation in the evening. In the afternoon, chance of a rise in temperatures is expected, with consequent natural avalanche activity on snowy slopes. Avalanche danger will be 2 (moderate), possibly increasing during the day, due to an increase in temperature. Natural avalanches will be possible at all exposures, especially during the warmer hours of the day. Generally, beyond the treeline, chance of triggered avalanches, mainly with a high overload on slopes with the presence of wind-blown accumulations, which are still unstable. On higher slopes, during warmer hours, chance of avalanches even with the passage of single skiers/hikers. Avalanches may generally be small or medium in size. On steep grassy slopes, glide avalanches are also possible.
