

Situation of 04 March 2022 edition of the hours 14-next update 07-03-2022 hours 14, forecaster: 0

reliability: 90%

To the north, at high altitudes, chance of triggered small avalanches, mainly with high overload.

Alpi Carniche occ., Prealpi Carniche occ., Prealpi Carniche orient., Alpi Carniche orient., Alpi Giulie, M. Canin, Prealpi Giulie

Thermal Zero: 1000 m
T.average 1000: 1 °C
T.average 2000: -7 °C

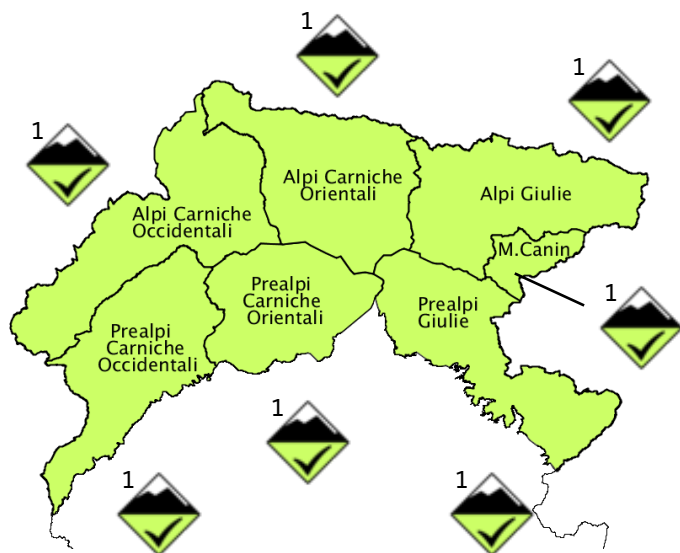

Weather by OSMER - ARPA FVG:
Variable in the afternoon with chance of weak local snowfall near Cadore.

Station	quota (m)	snow depth (cm)	fresh snow (cm)	Tmin (°C)	Tmax (°C)
RIFUGIO TAMAI - ZONCOLAN	1750	72	0	-7	3
VARMOST M.TE SIMONE	1870	65	0	-7	5
SELLA NEVEA - LIVINAL LUNC	1837	189	0	-8	3
PIANCAVALLO	1280	42	0	-6	4
TARVISIO	800	18	0	-5	11

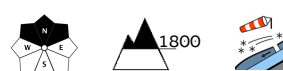

Snow cover conditions and avalanche danger: The snow cover is generally stable and well consolidated. In many areas, only a slight amount of snow will be present. On sunny slopes, no snow below approximately 1700 m. Wind-blown accumulations on an isolated level on very steep shady slopes are not yet well consolidated with the old snow. In the central portion of the snow cover on shady slopes, fragile layers with large grains are present. Avalanches danger is generally 1 (low) throughout the mountain territory. On extreme shady steep slopes above 1800-2000 m, and with high overload on an isolated level, chance of triggered small avalanches in areas with wind-blown accumulations. With high overload, on a very isolated level, chance of avalanches also in the old snow on steep northern extremes above approximately 2000 m. Beware of areas with hard or icy snow.

Forecast for Saturday 05 March 2022, reliability: 90%

To the north, at high altitudes, chance of triggered small avalanches, mainly with high overload.

Alpi Carniche occ., Prealpi Carniche occ., Prealpi Carniche orient., Alpi Carniche orient., Alpi Giulie, M. Canin, Prealpi Giulie

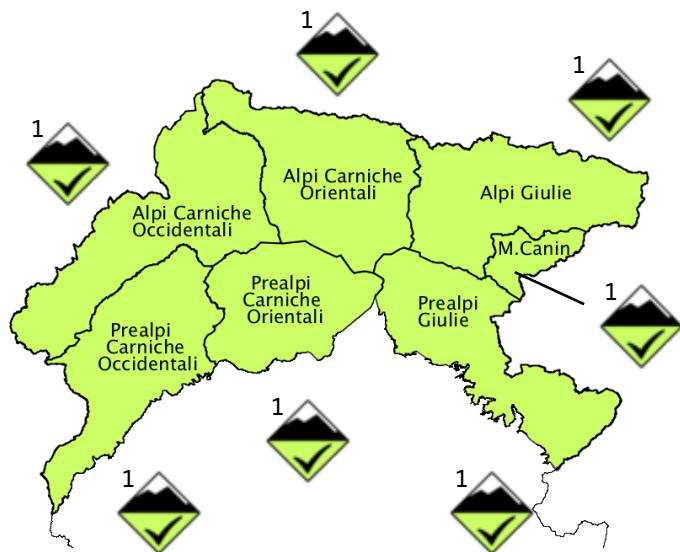

Thermal Zero: 700 m
T.average 1000: -2 °C
T.average 2000: -10 °C

Weather by OSMER - ARPA FVG:
Clear skies, winter temperatures, and moderate NE wind at high altitudes.

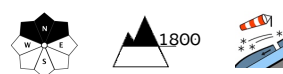

Snow cover conditions and avalanche danger: Nice weather. The snow cover is stable overall. In many areas, only a slight amount of snow will be present, on most sunny slopes, there will be no snow below 1700 m. Wind-blown accumulations at high altitudes are generally well consolidated with the old snow. In the central portion of the snow cover, on a very isolated level, fragile layers are present, especially on shady slopes above about 2000 m. Avalanche danger is generally 1 (low) throughout the mountain territory. On extreme shady steep slopes above 1800-2000 m, and with high overload, on an isolated level, chance of triggered small avalanches in areas with wind-blown accumulations. With high overload, on a very isolated level, avalanches can also occur in the old snow on steep northern extremes above approximately 2000 m. Beware of areas with hard or icy snow.

Forecast for Sunday 06 March 2022, reliability: 90%

To the north, at high altitudes, chance of triggered small avalanches, mainly with high overload.
