SNOW AVALANCHE REPORT n.58 the 08 April 2022

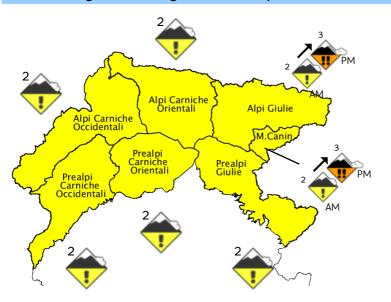

Situation of 08 April 2022 edition of the hours 14-next update 11-04-2022 hours 14, forecaster: MA

reliability: 80%

Avalanche danger 2, increasing to 3 on Julian Alps and Canin area, 2 elsewhere.

orient., Prealpi Giuli

Thermal Zero: 2700 m T.average 1000: 8 °C T.average 2000: 3 °C

Weather by OSMER - ARPA FVG:

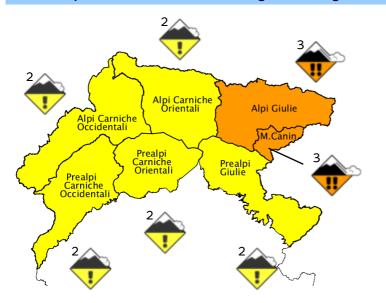

Overcast skies with light rain starting in afternoon, strong SW winds at high altitudes. Better inTarvisio.

Station	quota (m)	snow depth (cm)	fresh snow (cm)	Tmin (°C)	Tmax (°C)
RIFUGIO TAMAI - ZONCOLAN	1750	57	0	0,5	6
VARMOST M.TE SIMONE	1870	22	0	0	9,5
SELLA NEVEA - LIVINAL LUNC	1837	195	0	1,5	8,5
PIANCAVALLO	1280	33	0	1,5	8
TARVISIO	800	0	0	1	18

Snow cover conditions and avalanche danger: Weak snowfall above the 1800 m on the Julian Alps and Canin area. Avalanche danger is 2(moderate), increasing to 3 (considerable) on the Julian Alps and in the Canin area starting in theafternoon. Above the treeline, on very steep slopes, chance of natural and triggered avalanches, even with the passage of individual skiers or hikers. Small- and medium-sized avalanches, in somecases large, especially on the northern slopes are possible. On the Alps and Prealps, avalanchedanger is 2 (moderate). Avalanche phenomena are generally small in size, but larger ones cannot beexcluded on northern slopes.

Forecast for Saturday 09 April 2022, reliability: 70%

On Julian Alps and Canin area: avalanche danger 3; 2 throughout remaining territory.

Thermal Zero: 2100 m.

T.average 1000: 5 °C T.average 2000: -2 °C

Weather by OSMER - ARPA FVG:

Cloudy to overcast skies with abundant rain also intense in the east; snow reducing up to approx 800m.

Snow cover conditions and avalanche danger: Overcast skies and decreasing temperatures. During the day, moderate to abundant snowfall above 800 m, and continued strong winds from the North, which will form new accumulations in basins, ingullies, and near ridges. Avalanche danger will be 3 (considerable) on the Julian Alps and in the Caninarea. Beyond the treeline on steep slopes, chance of both natural and triggered avalanches, the latteron slopes and at higher altitudes, even with the passage of individual skiers and hikers. Avalanchephenomena are generally medium in size, but several larger may not be excluded in the NorthThroughout the rest of the territory, dangerous areas are more limited and avalanche danger will be 2(moderate). Avalanches will be generally small in size, larger ones are possible on northern slopes, especially on the Carnic Alps.

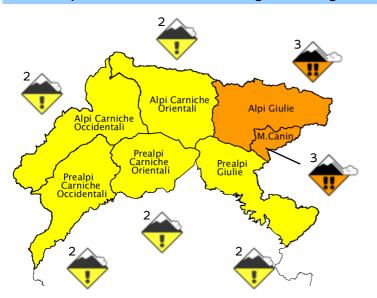

SNOW AVALANCHE REPORT n.58 the 08 April 2022

Forecast for Sunday 10 April 2022, reliability: 60%

On Julian Alps and Canin area: avalanche danger 3; 2 throughout remaining territory.

T max T min

Thermal Zero: 1600 m T.average 1000: 3 °C T.average 2000: -5 °C

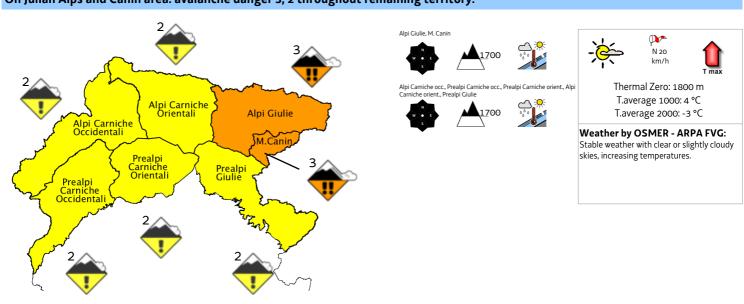

Weather by OSMER - ARPA FVG:

Mostly clear skies in the morning, variable in the afternoon. Decreasing temperatures.

Snow cover conditions and avalanche danger: Clear skies in the morning, variable starting in the afternoon, with decreasing temperatures. Moderatewinds from the North continue to reshape the new snow, forming additional new accumulations inbasins, gullies, and near ridges. Avalanche danger will be 3 (considerable) on the Julian Alps and in the Canin area. Beyond the treeline on steep slopes, chance of both natural and triggered avalanches, the latter on slopes and at higher altitudes, even with the passage individual skiers or hikers. Avalanchephenomena are generally medium in size, but several may be large in the North. Throughout the rest of the territory, dangerous areas are more limited, and avalanche danger will be 2 (moderate). Avalanches will generally small, but larger ones on northern slopes are not excluded, especially on the Carnic Alps.

Forecast for Monday 11 April 2022, reliability: 60%

On Julian Alps and Canin area: avalanche danger 3; 2 throughout remaining territory.

Snow cover conditions and avalanche danger: Slightly cloudy skies with increasing temperatures and freezing point at approximately 3000 m. Avalanche danger is 3 (considerable) on the Julian Alps and in the Canin area. Beyond the treeline onsteep slopes, chance of both natural and triggered avalanches. New slab avalanches, especially at thehighest altitudes on the northern slopes, are possible with the passage of individual skiers or hikers. Avalanche phenomena are generally medium in size, but several large ones are not excluded. Throughout the rest of the territory, dangerous areas are more limited, and avalanche danger will be 2 (moderate). Avalanches are generally small in size, but larger ones cannot be excluded on northernslopes, especially in the Carnic Alps. On steep southern grassy slopes, glide avalanches are alsopossible throughout.
