Snow cover conditions and avalanche danger: Variable skies with increased cloud cover starting in the afternoon and possible weak snowfall above 1300 m. The snow cover is generally stable throughout, and almost entirely absent on southern slopes. On steep slopes that are still covered with snow, the new snow may not bind well with the hard icy surfaces below, so beware of risk of slipping. Expected avalanche danger is 1 (low) throughout the territory. In the evening, isolated fresh-snow avalanches with weak cohesion are possible, especially from very steep slopes and rocky walls.
