T max T min

Thermal Zero: 1700 m
T.average 1000: 5 °C
T.average 2000: -3 °C

Weather by OSMER - ARPA FVG:

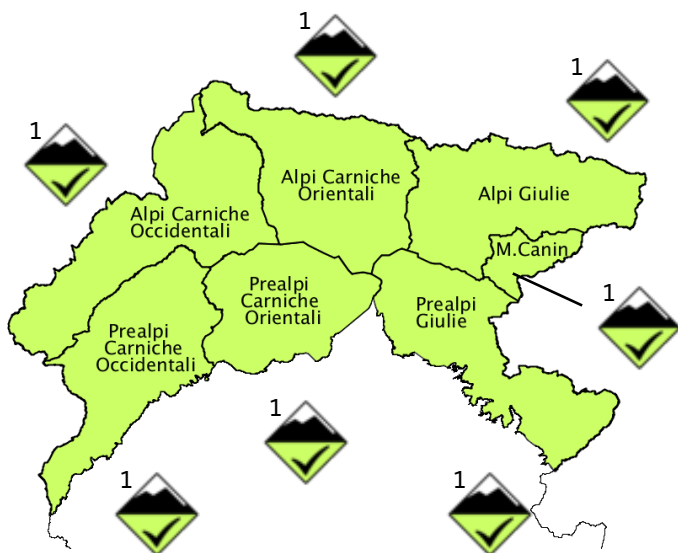

Slightly cloudy to variable skies with more consistent cloud cover over the Carnic Alps and Prealps.

Station	quota (m)	snow depth (cm)	fresh snow (cm)	Tmin (°C)	Tmax (°C)
RIFUGIO TAMAI - ZONCOLAN	1750	27	2	-3,5	3,5
VARMOST M.TE SIMONE	1870	5	0	-2,5	4,5
SELLA NEVEA - LIVINAL LUNC	1837	171	5	-4,5	3
PIANCAVALLO	1280	0	0	0,5	6,5
TARVISIO	800	0	0	-1	12,5

Snow cover conditions and avalanche danger: During the night, weak snowfall affected the mountain area, greater precipitation to East (5-10 cm) and weak or absent to the West. The snow cover is generally stable everywhere, and almost totally absent on southern slopes. The new snow has settled on the ground or on hard icy surfaces on slopes with the presence of old snow. In these areas, on very steep slopes, beware of the risk of slipping, since the old snow may not be well bonded. Expected avalanche of danger is 1 (low) throughout. Chance of isolated fresh-snow avalanches with weak cohesion, especially from rocky walls and very steep slopes.

Forecast for Thursday 21 April 2022, reliability: 80%

Generally stable snowy cover. Beware of the possible presence of icy layers.

T.average 2000: -1 °C

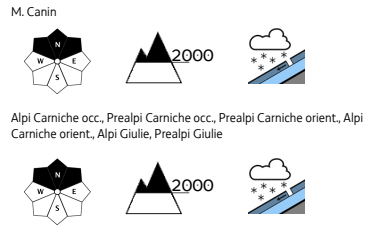

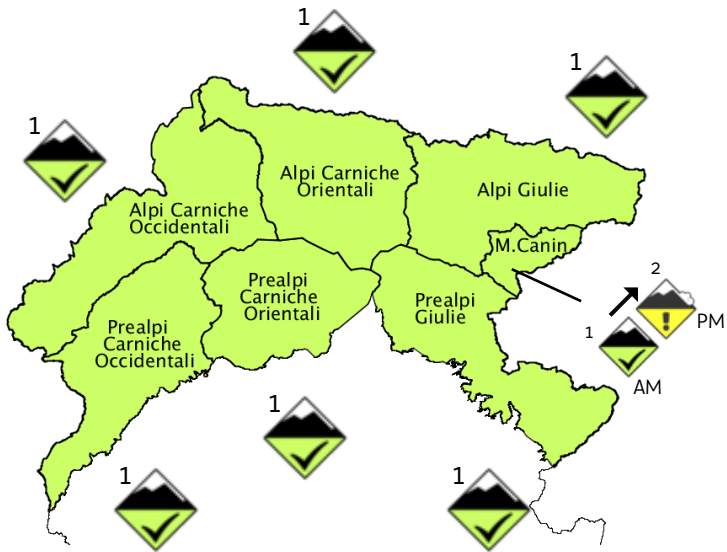

Weather by OSMER - ARPA FVG:

Slightly cloudy skies in the morning, then overcast.

Snow cover conditions and avalanche danger: Slight cloudy skies in the morning, variable in the afternoon. The snow cover is generally stable everywhere, and almost totally absent on southern slopes. On snowy slopes, the surface is hard and icy, so beware of the risk of slipping, especially in areas with fresh snow, since the bond with the old snow may be poor. Expected avalanche danger will be 1 (low) everywhere. Chance of isolated fresh-snow avalanches with weak cohesion, especially from rocky walls and very steep slopes, where snow has not yet detached. Under 2000 m, during the warmest hours of the day, chance of an increase in natural avalanche activity with the formation of small wet- or damp-snow avalanches.

Forecast for Friday 22 April 2022, reliability: 70%

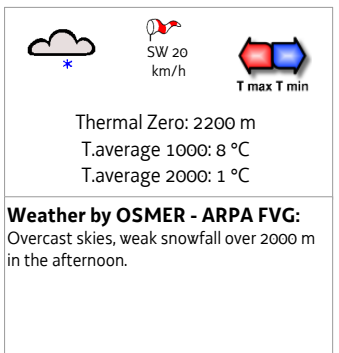

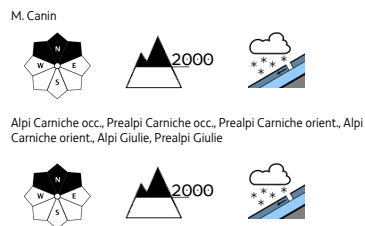

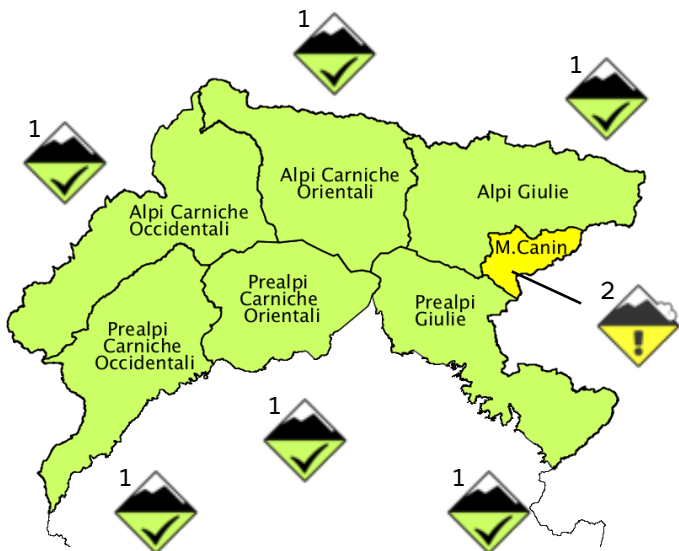

In the Canin area, avalanche danger increasing to 2 (moderate) during the day.

Snow cover conditions and avalanche danger: From night to early afternoon, snowfall at above 1500 m. The expected precipitation will be generally weak (5-10 cm), but more abundant in the Canin area (20 cm). On southern slopes, newsnow will largely settle on the ground while, on snowy slopes, it will settle on hard icy crusts. Wind may favor snow storms. On the Canin area, avalanche danger will be 1 (low), increasing to 2 (moderate) during the day. On very steep northern slopes, generally over 2000 m, chance of triggered small- and medium-sized avalanches on a local level, of even with a weak overload. Snow with weak cohesion may detach from rock walls. Throughout the rest of the mountain territory, avalanche danger will be 1 (low) in consideration of the expected lesser amounts of snow. Throughout the territory, under 2000 m, small wet- or damp-snow avalanches are possible.

Forecast for Saturday 23 April 2022, reliability: 60%

In the Canin area, avalanche danger will be 2 (moderate), 1 (low) in the rest of the territory.

Snow cover conditions and avalanche danger: Some light rain in the afternoon, with snowfall above 2000 m. In the Canin area, avalanche danger will be 2 (moderate), 1 (low) throughout the rest of the territory.
